

Dialogue Five : More on Function

Author: Let us discuss the methods of defining functions. One of them has already been employed quite extensively. I mean the analytical description of a function by some formula, that is, an analytical expression. (for example, expressions (1) through (9) examined at the end of the preceding dialogue).

Reader: As a matter of fact, my concept of a function was practically reduced to its representation by a formula. It was a formula that I had in mind ^{wherever} I spoke about a dependence of a variable y on a variable x .
